IGV Integrative Genomics Viewer

IGV

IGV desktop application

IGV Web App

IGV in a web browser

Juicebox Web

Hi-C contact map viewer

<https://igv.org>

For Developers

igv.js

Use igv.js to embed an interactive genome visualization component in your web app.

igv-notebook

A Python package that wraps igv.js for embedding in an IPython notebook. Supports both Jupyter and Google Colab.

igv-reports

Generate self-contained HTML reports that consist of a table of genomic sites and associated IGV views for each site.

All IGV software is open source - MIT License.

Contact Us

The IGV Team is based at UC San Diego and the Broad Institute of MIT and Harvard. The best way to reach us for support questions, bug reports, feature requests, and suggestions is by posting to the [igv-help](#) forum or by creating new issues in our GitHub repositories. To reach us privately on other topics not related to general support, feel free to email us directly.

Funding

IGV development has been supported by funding from the National Cancer Institute (NCI) of the National Institutes of Health, the Informatics Technology for Cancer Research (ITCR) of the NCI, and the Starr Cancer Consortium.

About IGV

<https://igv.org/doc/desktop>

Overview

The **Integrative Genomics Viewer (IGV)** is a high-performance, easy-to-use, interactive tool for the visual exploration of genomic data. It supports flexible integration of all the common types of genomic data and metadata, investigator-generated or publicly available, loaded from local or cloud sources.

IGV is available in multiple forms, including:

- the original **IGV** - a Java desktop application,
- **IGV-Web** - a web application,
- **igv.js** - a JavaScript component that can be embedded in web pages (*for developers*)

This site is focused on the IGV desktop application. See <https://igv.org> for links to all forms of IGV.

IGV website

<https://igv.org>

Usage license and source code

IGV is completely open for anyone to use under an MIT open-source license.

The source code repository for the IGV desktop application is hosted on GitHub at <https://github.com/igvteam/igv>.

Funding

Development of IGV has been supported by funding from the National Cancer Institute (NCI) of the National Institutes of Health, the Informatics Technology for Cancer Research (ITCR) of the NCI, and the Starr Cancer Consortium.

なぜIGVを取り上げるか

データ可視化ツール 2つのタイプ

- ・自分のパソコン(ローカル環境)にインストールして使うタイプ
- ・サーバーに構築して、ネットワーク上で使うタイプ

Download JBrowse 2

JBrowse 2 is a new browser for today's increasingly complex data. We make several different products for use in different scenarios, choose the one below that best fits your needs.

JBrowse Desktop

A standalone app that runs on your own computer that can view data from many sources. Download JBrowse Desktop on the platform of your choice:

Check out our quick start guide [instructions after downloading](#). Can't find what you're looking for? Checkout [other platforms](#).

JBrowse Web

Run a full-featured genome browser with many types of built-in views on your own website.

後者はコミュニティでの利用目的、ウェブ公開を目的とするには良い。より大容量なデータに対応できる。

ネットワーク・情報セキュリティに対する高度な知識が要求される。

管理者的な人がいるなら、これも良いが・・・

JBrowseも現在はIGV的な利用も可

JBrowse desktop

もっとお手軽なものとしてIGVを紹介

可視化ツールに求められるものは何か

膨大なデータを、如何に直感的、統合的に理解できるか
sortや絞り込みで定量的に理解する表データと対比双璧になる

多様なデジタル情報

- ・ 配列、GC ratio、遺伝子情報
- ・ 遺伝子発現情報
- ・ 遺伝子多型の位置情報・頻度情報
- ・ 様々なデータの精度情報
- ・ RNA-seq, ChIP-seq, RAD-seq, BS-seq . . .

レファレンス配列 / gene model / gene annotationと
NGSデータを並べて比較
複数のデータセットを並べて比較

様々なスケールで比較・統合的に解釈できるようにしたい

ゲノムviewerに自分のデータを乗せ、
統合的直感的に比較・解釈できること

可視化ツールをどう選ぶか

選択の基準

genome data viewing に求められるもの

取捨選択の基準

1. 無料 / 有料 / 基本無料
2. 個人的レベルの使用 / コミュニティーレベルの使用
3. 見るだけ/自分から色々工夫
4. アクセシビリティ・ユーザビリティ
 - 導入に必要なコンピュータスペック
 - マニュアルは分かりやすいか
 - 情報の多さ
 - 利用の簡便さ
 - 使っている人が近くにいますか

Integrative Genomics Viewer(IGV)

お手軽ツール

- 無料
- 多くの人が使っている、情報も多い
- javaのプログラムなので、オールプラットフォーム対応
- マニュアルは親切、サンプルデータもある
- WEBサーバーではなく、PCレベルで利用出来る
- データ閲覧環境の共有も可能

誰もが簡便に使えるものが良い。

Nature Biotechnology 29, 24–26 (2011) | doi:10.1038/nbt.1754

Published online 10 January 2011

To the Editor:

Rapid improvements in sequencing and array-based platforms are resulting in a flood of diverse genome-wide data, including data from exome and whole-genome sequencing, epigenetic surveys, expression profiling of coding and noncoding RNAs, single nucleotide polymorphism (SNP) and copy number profiling, and functional assays. Analysis of these large, diverse data sets holds the promise of a more comprehensive understanding of the genome and its relation to human disease. Experienced and knowledgeable human review is an essential component of this process, complementing computational approaches. This calls for efficient and intuitive visualization tools able to scale to very large data sets and to flexibly integrate multiple data types, including clinical data. However, the sheer volume and scope of data pose a significant challenge to the development of such tools.

IGV 3.0 Beta is now available

See [what's new](#).

Go to the [3.0 Beta download page](#).

IGV version 2.19.8

IGV for Windows

Java included

What's New: See the [Release Notes](#) for what's new in each IGV release.

All platforms

IGV requires Java 21 or greater as of IGV 2.19.1. If you download one of the IGV versions that does not include Java, make sure you have Java 21 installed and in your path.

Mac users: As of IGV 2.19.1, the IGV Mac apps require **MacOS 11 (Big Sur)** or greater.

- To run **the latest IGV** on older MacOS versions, download and use the **Command line IGV for all platforms** option from the main [Download page](#).
- To run **a working IGV Mac app** on older MacOS versions, download the **2.18.4 Mac app** (includes Java). Or load any IGV Mac app version 2.18.4 or earlier from the [IGV download archive](#).

Linux users: The *IGV for Linux* download includes AdoptOpenJDK (now Eclipse Temurin) version 21 for x64 Linux. See their list of supported platforms [here](#). If your platform is not on the "x64 Linux" list, or the packaged Java does not work on your version of Linux, download the *"Command line IGV for all platforms"* and use it with your own Java installation.

File Formats

IGV supports a number of different file formats for experimental data and genome annotations. For a complete list of supported formats see <http://www.broadinstitute.org/igv/FileFormats>. The following table shows the recommended file formats for a number of common data types.

Source Data	Recommended File Formats
ChIP-Seq, RNA-Seq	WIG, TDF
Copy number	CN, SNP, TDF, canary_calls (Birdsuite)
Gene expression data	GCT, RES, TDF
Genome annotations	GFF, BED, GTF, PSL, UCSC table format
GISTIC data	GISTIC
LOH data	LOH, TDF
Mutation data	MUT, MAF
Variant calls	VCF
RNAi data	GCT
Segmented data	SEG, CBS
Sequence alignment data	BAM, SAM, PSL
Any numeric data	IGV, WIG, TDF
Sample metatadata	Tab-delimited sample info file

sort base
collapse
snapshot
```

Inversions

An inversion is a large section of DNA that is reversed in the subject genome compared to the reference genome.

When an inversion shows up in paired-end reads, the reads are distinctively variant from the reference genome.

This appears in IGV as shown below.

Interpreting Color by Insert Size

The inferred insert size can be used to detect structural variants, such as:

- deletions
- insertions
- inter-chromosomal rearrangements

IGV uses color coding to flag anomalous insert sizes. When you select Color alignments>by insert size in the popup menu, the default coloring scheme is:

-  for an insert that is larger than expected
-  for an insert that is smaller than expected
-  for paired end reads that are coded by the chromosome on which their mates can be found

Deletions

A deletion is a large section of DNA that is absent in the subject genome compared to the reference genome.

The "expected" insert size is the insert size obtained in sequencing the subject genome. The "inferred" insert size is the insert size that would result in the reference genome, assuming the same pair of reads.

Gene List View

The Gene Lists functionalities in IGV allow you to view lists of genes or loci side-by-side irrespective of their genomic location.

Loading/Defining Gene Lists

To load or define a new gene/locus list, select *Regions > Gene Lists...*

The screenshot shows the IGV application window. The menu bar includes 'File', 'View', 'Tracks', 'Regions', and 'Help'. The 'Regions' menu is open, showing options: 'Region Navigator ...', 'Gene Lists...', 'Export Regions', and 'Import Regions ...'. The 'Gene Lists...' option is highlighted. A tooltip for 'Open gene list manager' is visible next to the 'Export Regions' option. The background shows a genomic track with a scale from 1 to 5.

This opens a window for selecting an existing list or creating a new list.

基礎生物学研究所の森田慎一助教、新美輝幸教授と重信秀治教授を中心として、金沢大学やモンタナ大学などが参加した国際共同研究チームは、カブトムシ *Trypoxylus dichotomus septentrionalis* の核ゲノムとミトコンドリアゲノム解読し、データベースを公開しました。

カブトムシの特徴である角がどのように獲得されたのかは、未だ明らかになっていません。詳細なゲノム情報は、角獲得の解明に対する鍵となると期待されています。今回研究チームは、次世代シーケンシング技術を用いてカブトムシのゲノムを解読し、角形成の遺伝的メカニズムを理解する基盤を確立しました。この新たなゲノム情報は、カブトムシの遺伝子機能や進化について包括的な解析を可能にし、これまでの研究を超える新たな可能性をもたらします。公開されたゲノム情報は、様々なカブトムシ研究の一助となることが期待されます。

本研究成果は科学学術誌 *Scientific Reports* に2023年5月30日付けで掲載されました。

全長cDNA配列をハイスループットで得る新技術

全長cDNAをそのままシーケンスするISO-Seq法
さらにcDNAを連結して、ハイスループットにシーケンス

現在はkit化された製品が利用可能

Full-length RNA-sequencing methods using long-read technologies can capture complete transcript isoforms, but their throughput is limited. We introduce multiplexed arrays isoform sequencing (MAS-ISO-seq), a technique for programmably concatenating complementary DNAs (cDNAs) into molecules optimal for long-read sequencing, increasing the throughput >15-fold to nearly 40 million cDNA reads per run on the Sequel IIe sequencer. When applied to single-cell RNA sequencing of tumor-infiltrating T cells, MAS-ISO-seq demonstrated a 12- to 32-fold increase in the discovery of differentially spliced genes.

IGV紹介のまとめ

可視化ツールとして十分な機能を持つ

- ・ 無料
- ・ 比較的簡単・お手軽
- ・ 自分で見るためにもよし、人に見せるためにもよし
- ・ 利用範囲は次世代DNAシーケンサーに限定しない
広くゲノミクスの解析に有用

ごく一部のみの機能を紹介しました。
ウェブサイトを見ながら復習をお勧めします。
